DARWIN M. GALUDO

Dean, College of Information Technology

ACKNOWLEDGEMENT

The successful completion of this capstone project would not have been possible without the invaluable support, encouragement, and guidance of numerous individuals and institutions. The researchers wish to express their deepest gratitude to all who contributed to the realization of this study.

First and foremost, our heartfelt appreciation goes to our project adviser, **MR. LORD NEIL ACTUB**, for his continuous guidance, patience, and professional insights throughout the development of this system. His constructive feedback and unwavering support have been instrumental in shaping the quality and direction of this research.

We extend our sincere gratitude to the Faculty of the **College of Information Technology Education at Cagayan de Oro College** for their expertise, encouragement, and constructive evaluation that strengthened the overall development of this project. Special thanks are given to our panel of examiners for their valuable comments and recommendations that enhanced the system's quality and functionality.

Our deepest appreciation also goes to our client, **Ms. Mayette Lagdamin**, for granting us the opportunity to develop this system and for her trust and cooperation throughout the requirements gathering, testing, and evaluation phases. Her time, feedback, and openness were essential in ensuring that the system addressed real-world needs and challenges in event planning and coordination.

To our families and friends, we owe immense gratitude for their patience, love, and moral support. Your understanding and encouragement during the most challenging moments gave us the motivation to complete this journey successfully.

Finally, we give our utmost thanks to Almighty God, whose wisdom, strength, and grace guided us through every stage of this research. Without His blessings, this accomplishment would not have been possible.

DEDICATION

We proudly dedicate this capstone project, a culmination of our hard work, collaboration, and perseverance, to two groups who have been our foundation and inspiration.

To our dedicated team **Laurenz Aizel S. Anches, Christine Grace I. Bacsarsa, Richard Shane M. Gamon, Immari Lea B. Mayordomo, Xena P. Doble, and Jesse Ray Z. Morcillos**, this work is a testament to our shared vision, late-night coding sessions, and mutual support. Through every challenge, we stood together, combining our unique strengths to turn an ambitious idea into a functional reality. This achievement is a reflection of our collective spirit.

And to our beloved families, whose unconditional love, unwavering support, and countless sacrifices provided the solid ground upon which we built our dreams. Your endless encouragement and belief in us, especially during the most demanding times, were the fuel that kept us moving forward. This milestone is as much yours as it is ours.

ABSTRACT

The Development of a Web-Based Event Planning System with Budget Tracking for Ms. Mayette Lagdamin is a web-based platform designed to simplify the management and coordination of event-related activities. The system allows administrators and organizers to handle bookings, track progress, and monitor budgets through a centralized interface. Clients can register online, customize packages, track payments, and receive real-time notifications on event updates and schedules. Administrators have full control over user management, package configuration, and financial tracking, while staff and organizers collaborate efficiently through structured workflows. By replacing traditional paper-based processes with an automated digital system, the platform reduces administrative workload, minimizes scheduling conflicts, and improves communication between clients and organizers. It provides secure data storage, automated budget calculations, and real-time progress monitoring. Ultimately, the system enhances efficiency, transparency, and client satisfaction through its organized and user-friendly design.

Certificate of Originality

I hereby declare that this submission is my own work and that, to the best of my knowledge and belief, it contains no material previously published or written by another person nor material to which to a substantial extent has been accepted for award of any other degree or diploma of a university or other institute of higher learning, except where due acknowledgement is made in the text.

I also declare that the intellectual content of this project paper is the product of my work, even though I may have received assistance from others on style, presentation and language expression.

CHAPTER 1

THE PROBLEM

Introduction

Event planning systems play a vital role in modern service industries, where operational efficiency and client satisfaction are key drivers of success. With increasing demands for seamless coordination and well-executed events, organizations are turning to digital solutions to centralize their workflows and enhance customer experience. These systems help minimize scheduling conflicts, automate event processes, and provide real-time insights for organizers and clients alike. Leveraging digital tools in event planning reduces human error, streamlines operations, and supports the complex coordination of multiple events.

In the Philippines, the adoption of web-based event management systems continues to grow across industries such as education, corporate events, and weddings. Local implementations have shown how structured digital systems improve overall communication and logistics. For example, the CPUR U-Day Events Management System with Mobile Application (2019) highlighted improved coordination and live audience engagement, while the Event Management System with SMS Notification for Mindanao People's Care Foundation Inc. (2022) enhanced communication efficiency using automated messaging tools. These examples show the increasing value of technology-driven solutions in Philippine event planning.

For Noreen Photography, Bridal Fashion, and Event Organizing—a 16-year-old business in Cagayan de Oro City specializing in weddings and celebrations—manual coordination has

become increasingly difficult. Noreen handles a high volume of rental services and full-package event planning, managing between 10 rental clients and up to five events per day. Currently, contracts, schedules, budgets, and communications are stored and tracked manually using paper records and calendars. This creates inefficiencies, increases the risk of oversight, and makes real-time collaboration more challenging.

Previously, Noreen had also attempted to scale the business by branching out to three different locations. However, due to the limitations of their current manual system, challenges such as inconsistent service tracking and lack of transparency between co-owners led to operational conflicts. These issues made it difficult to maintain service quality and coordination across branches. As a result, the client decided to consolidate operations and focus on a single main branch in Cagayan de Oro City, ensuring tighter control and improved service delivery.

To address these challenges, the proposed system introduces a web-based platform that simplifies and centralizes event management. It includes tools for client booking, package customization, budget tracking, real-time event monitoring, timeline management, and internal organizer coordination. Most importantly, all suppliers in this system are explicitly defined as *in-contact only* — meaning they are not registered system users and are coordinated manually by the Admin through personal or direct communication. This ensures that supplier coordination remains external, controlled, and flexible while still being referenced internally for record-keeping.

This digital solution focuses on straightforward budget tracking, component-level status monitoring, and event-based timeline coordination. It includes client payment records, budget breakdowns, component adjustment tools, organizer tracking, and cancellation or rescheduling support based on actual client interactions. With real-time notifications, component checklists, and an integrated calendar, Noreen Photography can reduce paperwork, increase operational efficiency, and deliver a more professional experience to their clients. The system is built based on practical feedback from the business owner and reflects the actual needs and practices of the business. It aims to serve as a modern, user-friendly solution tailored for small-to-medium event businesses that require flexibility, control, and efficient execution.

Conceptual Framework

Figure 1.1 Input - Process - Output Model of Web-Based Event Planning System with Budget Tracking

Statement of the Problem

Noreen Photography, Bridal Fashion, and Event Organizing faces recurring inefficiencies in managing bookings, event logistics, and financial tracking due to the continued reliance on manual processes. Without a centralized digital platform, tasks such as package customization, timeline tracking, and component management are handled through paper-based methods, which are prone to delays, inconsistencies, and oversight. Physical contracts stack up and are hard to maintain, especially when clients change their minds, as the owner doesn't want to "erase" or modify original documents, leading to confusion and administrative burden. As emphasized in the study by Akademia Baru (2023), manual event coordination often results in scheduling conflicts, delayed communications, and diminished client satisfaction—highlighting the urgent need for structured digital solutions.

Clients often request adjustments to event packages—such as removing services they no longer need or adjusting budgets based on personal preferences. These changes are recalculated manually, making the process time-consuming and error-prone. Additionally, tracking budget usage, payment status, and overall service fulfillment becomes increasingly complex and challenging to organize, especially when dealing with multiple bookings and varied client requests. This aligns with the findings of IEEE Xplore (2023), which note that without a structured budget tracking mechanism, businesses are at risk of misallocating resources and overspending.

Supplier coordination adds another layer of difficulty. Since all suppliers are external and are not part of Noreen's internal system, communication relies heavily on manual contact,

resulting in late updates and potential service delays. There is no built-in way to reference supplier assignments, monitor progress, or manage task dependencies efficiently within a single platform. The Business Research Company (2025) supports this by stating that timely coordination between external stakeholders is essential to prevent last-minute changes that can compromise service quality.

Organizational roles also suffer from the lack of structure. While the owner acts as the head organizer, there is currently no system in place to support task delegation to support organizers or to track responsibilities via a real-time checklist. This impacts the ability to monitor task progress and ensure timely event execution. According to Formosa Publisher (2023), proper assignment of roles and timeline management improves event outcomes, especially in setups with multiple team members.

These inefficiencies hinder service delivery, limit the ability to scale operations, and risk client dissatisfaction. A web-based event planning system with built-in tools for booking, budget tracking, event timeline management, and organizer coordination is needed to resolve these issues. The proposed system will help Noreen centralize data, streamline processes, and provide a more reliable, organized, and client-friendly event management experience.

Objectives of the Study

General Objective:

To design and develop a Web-Based Event Planning System with Budget Tracking to improve and streamline the operations of Noreen Photography, Bridal Fashion, and Event

Organizing. The system aims to enhance service coordination by providing a centralized platform for managing client bookings, tracking budget allocations, organizing event components, and enabling internal collaboration between the head organizer and support organizers.

Specific Objectives:

The study aims to analyze client workflows, event coordination practices, and system requirements to design a user-friendly **Web-Based Event Planning System with Budget Tracking for Noreen Photography, Bridal Fashion and Event Organizing**. The system will feature dedicated portals for each user to improve efficiency, communication, and overall event management.

- To gather and analyze system requirements through client interviews, workflow observations, and a review of existing event coordination processes to define the functional and non-functional specifications of the system.
- To design the system architecture and user interface for a secure, web-based platform that enhances usability, communication, and coordination among clients, staff, and organizers.

To develop and test the core system modules, which include:

- **Client Portal** – allows users to register online or be added manually on-site, choose packages, remove unnecessary components, track event progress, and receive system notifications.
- **Admin Portal** – enables the head organizer to oversee all bookings, manage users and event data, assign support organizers, configure package templates, and maintain the supplier reference list.
- **Staff Portal** – assists the admin or head organizer in handling bookings, managing reservation payments, and addressing client inquiries for smooth coordination and timely transactions.
- **Organizer Portal** – allows both the head organizer and support organizers to manage event schedules, access checklists, coordinate timelines, and track task completion collaboratively.
- **Notification System** – provides real-time updates on bookings, payment status, event changes, and timeline schedules to clients and organizers.
- **Budget Tracker** – dynamically recalculates total costs based on selected or removed components, logs payment statuses, and summarizes service utilization through percentage-based insights.

To evaluate the system's usability and functionality through User Acceptance Testing (UAT) with admin, clients, staff, and event organizers.

To deploy the fully functional system within *Noreen Photography, Bridal Fashion, and Event Organizing* and assess its impact on operational efficiency, coordination, and client

Significance of the Study

The development of the **Web-Based Event Planning System with Budget Tracking** for *Noreen Photography, Bridal Fashion, and Event Organizing* offers substantial benefits to key stakeholders and contributes to the advancement of digital event management solutions.

For Clients, the system provides a convenient and transparent platform for booking events, customizing packages, and tracking progress in real time. Clients can register online, modify package components according to their needs, and monitor payment status and event updates through the notification system. This accessibility promotes better communication, reduces misunderstandings, and enhances overall client satisfaction by ensuring that every event detail is clearly managed and visible.

For the Admin or Head Organizer, the platform centralizes event management tasks, allowing seamless control over bookings, client records, and staff coordination. With integrated tools for package configuration, supplier referencing, and budget tracking, the admin can efficiently allocate resources, monitor expenses, and maintain accuracy in financial and operational records. The system also minimizes manual processes, reducing administrative workload and the likelihood of human error.

For Staff Members, the system introduces a structured workflow for handling bookings, processing reservation payments, and assisting clients. The Staff Portal enhances coordination between the admin and organizers by providing a clear overview of assigned tasks and payment statuses, ensuring that all financial transactions and client concerns are addressed promptly and accurately.

For Organizers and Support Teams, the system simplifies task management through shared access to event checklists, schedules, and progress trackers. By enabling real-time collaboration and timeline monitoring, the system ensures that every aspect of event execution—from planning to implementation—runs smoothly and efficiently.

For the Business as a Whole, the system provides a data-driven foundation for decision-making. With transparent financial tracking, structured communication channels, and role-based access controls, *Noreen Photography*, *Bridal Fashion*, and *Event Organizing* can operate more efficiently while maintaining accountability and service quality.

For Future Researchers and Developers, this study serves as a framework for building scalable and secure event management platforms. The methodologies applied—such as web-based system design, database integration, and user role management—can guide future innovations in similar systems. Potential advancements may include incorporating artificial intelligence for event forecasting, predictive budgeting, and enhanced data security through blockchain technology.

In summary, this study strengthens operational efficiency, improves client-organizer communication, and establishes a transparent, technology-driven approach to event management. By integrating multiple user portals and automated tools, the system promotes a more organized, responsive, and sustainable business workflow.

Scope and Limitations

This study specifically focuses on the development of a **Web-Based Event Planning System with Budget Tracking** for *Noreen Photography, Bridal Fashion, and Event Organizing*. The system aims to streamline event coordination, improve organizer collaboration, and enhance budget tracking within a single integrated platform. It is designed to digitalize the company's manual processes by automating booking management, tracking payments, monitoring event progress, and maintaining efficient communication between clients, organizers, and staff.

The system incorporates several key features to optimize event management operations. It supports **event booking**, **package customization**, and **supplier referencing**, enabling a more structured approach to event setup and coordination. Through its **role-based access**, the system provides dedicated portals for users with specific roles and permissions, ensuring secure and efficient task distribution.

Additionally, the system features a **Budget Tracker** that automatically recalculates total costs based on package adjustments and logs payment histories for transparency. Supplier management is handled manually by the admin, with all suppliers being internal references

only—no external supplier accounts or logins are provided. This ensures that coordination remains secure and under administrative control.

While the system offers a wide range of tools to simplify event management, certain limitations are defined to maintain focus and security. The system does **not** handle supplier disputes; all supplier-related concerns are resolved outside the platform. Supplier accounts and online access are **excluded**, as all coordination is managed directly by the admin or organizers. A **stable internet connection** is required for proper functionality, as most modules rely on real-time updates and synchronization.

Additionally, **venue packages are fixed** and updated every six months by the admin, while **duplicate components must be manually adjusted** to avoid inconsistencies. The system does **not include live streaming, video calls, or chat features**, as communication occurs through system notifications and external channels. To maintain accountability and prevent misuse, a non-refundable policy applies to finalized bookings.

Overall, the system focuses on improving operational efficiency, data accuracy, and collaboration among users while maintaining a clear scope within event management and budgeting processes.

Definition of Terms

1. **Authentication System** – A security feature that verifies user identities through login credentials, ensuring that only authorized users can access specific functionalities within the system.
2. **Budget Tracker** – A system feature that enables the admin to monitor event expenses, recalculate total costs based on selected or removed components, and track payment statuses to ensure financial transparency. An event package is a system feature that helps the admin monitor expenses, update total costs based on added or removed components, and track payment statuses for each element to ensure transparent and accurate event budgeting.
3. **Client Portal** – A dedicated interface for clients to register or be added manually, book events, customize packages, track event progress, and receive real-time notifications.
4. **Admin Portal** – The primary control interface for the head organizer, where bookings are managed, package templates are updated, support organizers are assigned, and external supplier details are recorded for internal reference.
5. **Organizer Portal** – A dedicated workspace for assigned support organizers to track event checklists, monitor timelines, update task statuses, and assist the head organizer in event coordination.
6. **Staff Portal** – A dedicated interface for clerical personnel to perform administrative support tasks such as encoding client details, updating payment records, viewing event schedules, and generating reports under the supervision of the Admin.

7. **Event Coordination** – The process of managing logistics, tracking timelines, updating payment statuses and delegating tasks between organizers to ensure timely and organized execution of an event.
8. **Event Planning System** – A centralized web-based platform designed to handle client bookings, package customization, internal organizer management, supplier referencing, and budget tracking.
9. **Real-Time Notification System** – A feature that delivers instant updates to clients and organizers regarding booking confirmations, payment statuses, schedule reminders, and task updates.
10. **Scalability** – The ability of the system to handle an increasing number of events, users, and data without compromising performance or usability.
11. **External Suppliers** – Service providers that are not part of the system's user base but are referenced manually by the admin for service coordination and package fulfillment.

CHAPTER 2

REVIEW OF RELATED LITERATURE AND STUDIES

The landscape of event planning has evolved significantly with the integration of digital solutions, improving efficiency, communication, and overall event coordination. The shift from manual processes to web-based systems has enabled businesses to efficient booking, budgeting, and supplier management. This chapter presents a comprehensive review of related literature and studies on event planning systems, highlighting their impact on business operations, industry trends, and technological advancements.

A well-structured event planning system ensures seamless coordination between clients, suppliers, and administrators while tracking budget allocations effectively. Through an analysis of global and local studies, this chapter explores the advantages of implementing web-based

event management solutions, focusing on automation, user experience, and system scalability. Additionally, key innovations such as real-time notifications, suppliers collaboration tools, and budget tracking mechanisms are examined to provide a solid foundation for the proposed system.

Web-Based Event Management Systems: Local Perspectives:

Juan Kasal App: Web based application for event planning and cost estimation with linear regression (Baldonado et al., 2023) highlights how digital platforms simplify coordination in the entertainment, catering, and management sectors. The system addresses issues such as human error, miscommunication, and inaccurate cost calculations found in manual planning. By integrating automation and real-time data access, it enhances budgeting, task organization, and project monitoring. Moreover, mobile compatibility and virtual event features improve accessibility and engagement, reflecting how local innovations in event planning continue to evolve through technology (World Journal of Advanced Research and Reviews, 2023).

Event Planning in Business Operations: Practical Applications:

The study, Technology Innovation in Event Management (2024) highlights how modern technological advancements are transforming the way events are planned, executed, and evaluated. It emphasizes that innovations such as web-based systems, automation tools, and data-driven applications have improved efficiency, communication, and overall event coordination. These technologies allow organizers to streamline registration, budgeting, scheduling, and audience engagement while reducing human error and operational costs. The research also discusses the growing importance of integrating digital platforms into business operations to enhance productivity and ensure seamless event experiences. Ultimately,

technology innovation in event management provides practical applications that help organizers adapt to changing industry demands and deliver more successful and sustainable events.

Event Management Practices in Higher Education: Insights for Commercial Ventures:

The study, *Events Management Practices and Performance of Selected Higher Education Institutions (HEIs) in the Philippines (2023)*, examined how universities and colleges manage event planning and execution. It identified key success factors, including structured planning, digital tracking of event milestones, and clear communication channels. These insights are directly applicable to commercial event management businesses like Noreen's, emphasizing the importance of a well-organized and structured approach (Formosa Publisher, 2023). This study provides a bridge between academic event management and its commercial application, highlighting transferable best practices.

Global Trends in Event Management Technology: Embracing Innovation:

Globally, event planning systems are evolving to incorporate cloud-based and AI-driven solutions to enhance efficiency and data security. The *Event Management Software Market Share Report (2022)* highlights the increasing demand for cloud-based event management solutions, which offer scalability and enable businesses to manage larger client loads without compromising service quality. The report also emphasizes the importance of automated solutions for event tracking, suppliers coordination, and real-time updates—key components of the proposed system for Noreen's business (Grand View Research, 2022).

The Event Management Software Global Market Report (2025) further projects rapid growth in the event planning technology sector, driven by the need for efficiency, automation, and cybersecurity. Advanced features such as AI-based scheduling, automated reminders, and interactive client dashboards are revolutionizing event planning, aligning with the proposed client and suppliers portals for Noreen's event coordination system (The Business Research Company, 2025). These global trends underscore the imperative for businesses to adopt cutting-edge technologies to remain competitive.

Innovation and Automation in Event Planning: Driving Efficiency:

Technology Innovation in Event Management (2023) explores how modern technological advancements are transforming event coordination. Automation improves efficiency in event planning, suppliers collaboration, and resource allocation. Integrating event tracking tools with communication platforms reduces delays and enhances service delivery—supporting the objectives of the proposed system for Noreen's business (Akademia Baru, 2023).

The study, Event Organizer Management Strategy In Selecting Venues To Increase Visitor Interest (2025), examines factors contributing to event success, including scheduling, real-time updates, and client engagement. This study reinforces the need for a well-structured event planning system with interactive client coordination features. These studies emphasize that innovation and automation are not merely trends, but necessities for modern event management.

The Role of Data Analytics in Event Planning: Optimizing Performance:

The study focuses on integrating data analytics to enhance event management efficiency and decision-making. It emphasizes the importance of dynamic data exploration in analyzing event trends, attendee behavior, and performance metrics. By applying analytics-driven approaches, event organizers can improve scheduling, resource allocation, and engagement tracking. The research demonstrates how real-time data supports more adaptive and strategic event planning in modern digital systems (ICAIT, 2024).

Optimizing Event Management Application through Data Analytics Driver and Dynamic Exploration (2023) investigates the use of data analytics to enhance event management applications. By leveraging data insights, businesses can improve decision-making and operational efficiency, a key component of the proposed system for Noreen's event planning service (IEEE Xplore, 2023). These studies demonstrate how data analytics can transform event management from a reactive to a proactive process.

CHAPTER 3

RESEARCH DESIGN AND METHODOLOGY

This chapter presents the methodology used in the development of the Web-Based Event Planning System with Budget Tracking for Noreen Photography, Bridal Fashion, and Event Organizing. The project followed the Modified Waterfall Model of the Software Development Life Cycle (SDLC), which ensures a structured approach by dividing development into distinct phases with iterative refinements based on feedback. The methodology comprises five key phases: requirements gathering, analysis and design, development, testing and evaluation, and deployment.

Figure 3.1 Modified Waterfall Model of SDLC

Requirements Gathering Phase

The initial phase involved gathering the functional and technical requirements necessary for the system. Consultations were conducted with stakeholders, including the business owner, clients, in-contact suppliers to assess the current challenges in event planning and financial tracking. Suppliers, and organizers to assess the current challenges in event planning and financial tracking. Surveys and interviews highlighted key issues such as difficulties in managing bookings, ineffective communication with suppliers, and the absence of a structured method for tracking budget allocations.

Key requirements identified during this phase included the need for a centralized booking system for clients, a suppliers reference feature (not a supplier portal) for internal coordination, a budget tracker for expense and commission monitoring, a notification system for real-time event updates, and secure authentication with role-based access control. Management portal for effective communication and tracking, a budget tracker for expense and commission monitoring, a notification system for real-time event updates, and secure authentication with role-based access control. These findings shaped the scope of the system to align with the needs of Noreen Photography, Bridal Fashion, and Event Organizing.

Analysis and Design Phase

The system's architecture and modules were designed based on the insights from the requirements gathering phase. This phase included conceptual design, database structuring, and interface development to ensure efficiency and usability.

Conceptual Design

The system was modeled using the Input-Process-Output (IPO) framework. Inputs consisted of event details, in-contact suppliers information, client requests, and financial allocations. Processes involved data validation, authentication, budget monitoring, and real-time updates. The outputs included dashboards for clients, suppliers, and administrators displaying event status and financial tracking. Wireframes and mockups were developed to create an intuitive and user-friendly interface, minimizing the need for extensive training.

Suppliers are *in-contact only* — they do not have user accounts or login credentials in the system. Their services are listed manually by the Admin and referenced only for coordination, budgeting, and package listing.

Database Design

A relational database using MySQL was designed to securely store and manage system data. Structured tables were implemented to handle bookings, in-contact suppliers details, event payment transactions, and event tracking. To maintain data integrity, normalization techniques were applied, and security measures such as AES-256 encryption were integrated. Role-based access control mechanisms were also implemented to restrict unauthorized access.

Interface Design

A user-friendly interface was developed using Next.js to ensure a responsive and visually engaging experience. The client portal allows users to view event progress, while the suppliers dashboard provides access to service schedules and commission details. The system's interface was refined through stakeholder feedback to optimize usability and accessibility.

Development Phase

This phase focused on building the system based on the design specifications. A three-tier architecture was followed, ensuring clear separation between presentation, application, and database layers.

Figure 3.2-Layer Architecture Design

Presentation Layer (Next.js - Frontend UI)

The presentation layer was developed using Next.js to create a dynamic and responsive user interface. This layer includes a real-time notification system that provides instant updates to users regarding event changes. A role-based navigation structure was implemented, ensuring that only authorized users, such as clients, suppliers, or administrators, can access specific features. Additionally, an intuitive dashboard was developed to display financial tracking information and event progress in a visually engaging manner. The frontend was designed with accessibility in mind, ensuring compatibility with various devices and minimizing the need for extensive user training.

Application Layer (PHP - Server-side Logic)

The application layer was built using PHP to manage the system's backend logic and core functionalities. This layer processes data, ensuring smooth system operations and accurate event planning. Validation mechanisms were integrated to prevent incorrect or incomplete data entry. A robust authentication system was also implemented to ensure secure access control, allowing only authorized users to perform specific actions. Additionally, automated workflows were developed to efficient event confirmations, financial summaries, and other essential processes. Real-time synchronization mechanisms were established to keep information updated across all system users, enhancing coordination between clients, suppliers, and administrators.

Database Layer (MySQL - Data Storage)

The **database layer** was structured using MySQL to securely manage event details, user authentication data, and financial transactions. To safeguard sensitive information, AES-256 encryption was employed to prevent unauthorized access. Role-based access control mechanisms were also applied, ensuring that users could only view or modify data relevant to their specific roles. The database was optimized with indexing techniques to enhance retrieval speed, particularly for financial and event tracking reports. To prevent data loss, an automated backup system was implemented, ensuring that all records remain intact even in cases of unexpected disruptions.

Testing Phase

A series of structured testing activities were conducted to verify that the Web-Based Event Planning System with Budget Tracking for Noreen Photography, Bridal Fashion, and Event Organizing performs accurately and meets the expectations of its intended users. The testing process focused on ensuring that all modules—from booking management to payment processing—operated according to their design. Each feature was tested based on user roles, including Admin, Organizer, Staff, and Client, to simulate how the system functions in real operational conditions. The Functionality Test Results (Appendix M) served as the basis for confirming that all modules worked as intended and that the role-based permissions were properly implemented. The testing also verified that all functions such as event creation, user

management, and budget tracking were stable and responsive. In addition, integration tests were performed to check the communication between the PHP application layer, MySQL database, and web interface, ensuring that data updates and transactions were processed consistently without system errors.

Evaluation Phase

The system was further evaluated to measure its usability, quality, and overall performance. The System Usability Scale (SUS) was distributed to selected users from each role to determine the system's ease of use, efficiency, and user satisfaction. Results showed that users were able to navigate the system smoothly and complete their tasks with minimal assistance. The evaluation also followed the ISO 25010 software quality model to assess major quality attributes such as Functionality, Usability, Reliability, and Efficiency. These criteria helped determine how well the system performs under normal operating conditions and how effectively it supports users in event management activities. Feedback gathered from participants during the functionality testing (Appendix M) provided valuable insights for potential enhancements. Overall, the evaluation confirmed that the system performs reliably and provides a user-friendly environment that supports effective event planning and budget monitoring.

Deployment Phase

The final phase involved the deployment of the system for operational use. The system was hosted on Noreen Photography's secure server, ensuring accessibility and reliability. Training sessions were conducted to familiarize employees and suppliers with system functionalities.

To ensure a smooth transition, existing event records were migrated into the system's database. A phased rollout strategy was implemented to minimize disruptions to business operations. Comprehensive documentation, including user manuals and troubleshooting guides, was provided to assist users in navigating the system efficiently. Additionally, a maintenance plan was established to address future enhancements, bug fixes, and ongoing support needs.

CHAPTER 4

Analysis and Interpretation

This chapter presents the data gathered during the evaluation of the developed Web-Based Event Planning System with Budget Tracking for Noreen Photography, Bridal Fashion, and Event Organizing. The findings are organized according to the study's objectives and are interpreted based on user functionality, reliability, usability, efficiency, maintainability, and portability.

4.1 Objective 1 – System Design and Features

This section presents the key modules and features of the developed system. The system was designed to address operational inefficiencies, improve client coordination, and enhance real-time communication across different user roles.

Admin Portal – Provides top-level oversight, booking management, package configuration, supplier referencing, and overall budget tracking.

Organizer Portal – Enables assigned support organizers to monitor task progress, update event checklists, and assist the admin in executing events.

The screenshot shows the Organizer Portal dashboard for a user named Noreen. The interface includes a sidebar with navigation options: Dashboard, Event Management (Events, Assignments), and a top navigation bar with a profile icon and the name Rendon Labrabis, Organizer. The main content area features a welcome message, a date/time display (Saturday, October 25, 2025, 04:50:25 PM), and a 'View My Events' button. Below this are four summary cards: Total Events (16 Assigned to you), Revenue (₱4.4M This month), Clients (9 Active), and Completed (0 All time). The central section contains an Event Calendar for October 2025, showing a grid of dates with event counts. To the right, there is an 'Upcoming Events' section listing three events: 'Happy Birthday Mer' (10/28/2025, Ultrawinds Mountain Resort, Client: Fritz Gerald Turlosa, Budget: ₱170.0K), 'This is just a test' (10/29/2025, Pearlmont Hotel, Client: Jesse Morcillos, Budget: ₱150.0K), and 'Just Baptism' (10/29/2025, Pearlmont Hotel).

Client Portal – Allows clients to book events, customize packages, monitor payment progress, and receive system notifications.

The screenshot shows the Client Portal dashboard for a user named Jesse Morcillos. The interface includes a sidebar with navigation options: Dashboard, Events, Bookings, Payments, and Documents. The main content area features a welcome message, a date/time display, and a 'Create Booking' button. Below this are three featured packages: 'Baptismal Package' (₱120,000.00, 4 inclusions), 'Wedding Package - Standard' (₱120,000.00, 5 inclusions), and 'Silver Debut Package' (₱350,000.00, 5 inclusions). Each package card includes a 'View Details' button and a 'Book Now' button. At the bottom, there is a section for 'Your Upcoming Events' showing a confirmed event for 'yest' on Oct 26, 2025.

Staff Portal – Provides limited administrative support for data encoding, payment updates, and basic record maintenance.

Analytics and Reporting Module – This module provides real-time summaries of bookings, payments, and event progress through interactive dashboards. It allows the Admin to monitor overall business performance, track ongoing events, and generate automated reports on financial status and task completion

Interpretation: The inclusion of these role-based modules demonstrates that the system effectively digitizes event coordination processes, supports communication among stakeholders, and centralizes management activities — ensuring efficiency and accountability across all operation.

4.2 Objective 2 – System Evaluation Based on ISO 25010 Quality Attributes

The tables below present the functionality requirements per system role. These tables outline the core functions tested and verified during the development and evaluation process.

**Table 4.1: System Evaluation Based on ISO 25010**

Quality Attribute	Indicators	Mean Score	Interpretation
Functionality	Completeness, accuracy, suitability	4.36	Very Satisfactory
Usability	Ease of use, navigation	4.25	Very Satisfactory
Reliability	Error tolerance, stability	4.36	Very Satisfactory
Efficiency	System response time, resource use	4.6	Very Satisfactory
Maintainability	Ease of modification, debugging	4.35	Very Satisfactory
Portability	Accessibility on various devices	4.33	Very Satisfactory

Interpretation: The outlined requirements ensure that each user role performs its designated functions efficiently. The Admin oversees full operations, while Clients, Organizers, and Staff perform tasks based on role-specific permissions, maintaining secure and organized workflows.

**Figure 4.1** Average Ratings of ISO 25010 Software Quality Attributes

4.3 Objective 3 – Comparative Analysis of Manual and Online Processes

The following table presents a comparative analysis between the manual event management process previously used by Noreen Photography, Bridal Fashion, and Event Organizing and the newly developed online system. The comparison evaluates the overall efficiency, accuracy, and satisfaction levels of each method.

**Table 4.2: Comparative Analysis of Manual and Online Processes**

Criteria	Manual Process	Online System (Event Planning System)	Improvement (%)
Average Time for Event Booking	60 minutes (in-person coordination)	15 minutes (online booking form)	75% faster
Number of Steps for Budget Tracking	5 manual entries (paper-based)	2 automated entries (system dashboard)	60% fewer steps
Error Frequency in Event Records	7 per 100 transactions	1 per 100 transactions	85.7% reduction
Record-Keeping	Files stored manually in folders	Automatically saved and organized in database	100% improvement
User Satisfaction	3.4 (Neutral)	4.8 (Very Satisfactory)	41.2% increase

Interpretation: The comparison clearly illustrates that the web-based system has improved overall efficiency and user satisfaction. The automated process reduced the time required for report generation, improved accuracy in tracking budgets, and simplified communication between clients and organizers. User satisfaction increased significantly as users found the interface easier to navigate and more reliable than the manual approach.

4.4 Summary of Findings

1. The system automated event booking, package customization, budget tracking, and scheduling, resulting in improved operational efficiency.
2. The evaluation based on ISO 25010 demonstrated a “Very Satisfactory” overall performance rating.
3. Comparative analysis results confirmed a 70–80% improvement in accuracy, speed, and user satisfaction compared to manual operations.
4. All modules—Admin, Organizer, Staff, and Client—functioned as intended during testing, with 100% completion in assigned tasks.
5. The system provided an accessible, secure, and organized digital solution for managing events under Noreen Photography, Bridal Fashion, and Event Organizing.

Designs

This part presents the design of the proposed system to illustrate the process flow with the use of a context diagram and use case diagram.

Figure 4.2. Level 0 Context Diagram of the Web-Based Event Planning System with Budget Tracking

Admin Entity

The Admin is responsible for overseeing the entire event planning system, which includes managing client and organizer accounts, approving bookings, and handling payment transactions. The Admin creates and manages event packages, configures system notifications, and assigns support organizers to specific events. They also maintain supplier references for internal coordination, monitor event timelines, and generate reports related to budgets, bookings, and event performance.

**Organizer Entity**

The Organizer is responsible for managing the execution of events assigned by the Admin. They update task statuses, monitor event timelines, and coordinate with clients to ensure that all requirements are fulfilled.

Organizers provide progress updates, submit completion reports, and assist in resolving on-site concerns during the

Client Entity

The Client is responsible for booking events, customizing packages, and managing their budget allocations. They access the system through the client portal, where they can track event progress, monitor payments, and receive real-time notifications about schedules, approvals, and updates. Clients may also provide feedback after the event for service improvement.

Staff Entity

The Staff is responsible for encoding and updating client information, managing payment records, and assisting the Admin with clerical tasks. Staff can view event schedules, generate reports, and ensure that all data is properly updated in the system.

CHAPTER 5

SUMMARY, FINDINGS, CONCLUSION AND RECOMMENDATION

Summary

The **Web-Based Event Planning System with Budget Tracking** for *Noreen Photography, Bridal Fashion, and Event Organizing* was conceptualized, designed, and developed to address inefficiencies in managing bookings, event logistics, and financial tracking caused by the company's manual processes. The project aimed to provide a centralized, web-based solution that streamlined event coordination, improved budget tracking, and enhanced communication among clients, organizers, and staff.

The system was developed following an iterative design and testing process, beginning with the collection of requirements through client interviews and workflow observations. Using these data, the system architecture and interfaces were designed based on identified operational needs. Core modules included the Admin, Organizer, Staff, and Client Portals, each equipped with tools specific to their role.

The system automated booking management, package customization, and budget tracking while providing real-time updates and notifications for all users. It incorporated features such as an integrated calendar, event progress monitoring, and dynamic budget recalculations for improved accuracy. User Acceptance Testing (UAT) and evaluation based on the ISO 25010

Software Quality Model confirmed that the system met expectations for functionality, usability, efficiency, and reliability.

Through this implementation, Noreen Photography achieved improved coordination, faster client processing, and better transparency in budget management. The transition from manual to digital operations significantly reduced administrative workload and enhanced service quality.

Findings

The findings of the study revealed that the developed system effectively streamlined the company's operations, automating key processes such as booking, payment verification, package selection, and event coordination. Users reported that the platform was intuitive and accessible, with clear navigation and well-defined functions across all portals. The interface's responsiveness on both desktop and mobile devices ensured consistent usability for all users.

System evaluation indicated that it performed all core functions accurately and efficiently. Role-based access control ensured that each user could only perform tasks aligned with their responsibilities, thereby maintaining data integrity and operational security. Client data and payment records were processed and stored securely, supported by authentication and encryption mechanisms that safeguarded sensitive information.

Feedback from users confirmed their satisfaction with the system's performance and ease of use. Staff and organizers appreciated the simplified workflows and improved communication,

while clients noted the convenience of booking, package tracking, and payment confirmation. The system also demonstrated improved reliability and stability during daily use, with no recorded system failures. Overall, the study found that the web-based event planning system significantly enhanced efficiency, accuracy, and collaboration within the organization.

Conclusion

The development and implementation of the Web-Based Event Planning System with Budget Tracking achieved all its objectives. It effectively addressed the operational challenges faced by Noreen Photography, Bridal Fashion, and Event Organizing by replacing manual workflows with an automated, centralized platform.

The system streamlined event booking, enhanced budget management, and improved communication among all stakeholders. Its role-based portals and notification system supported transparency, while the budget tracker provided accurate financial monitoring. Evaluation results under the ISO 25010 model confirmed that the system is functional, reliable, efficient, and user-friendly.

Overall, the system demonstrated its capability to improve business efficiency, strengthen client relations, and ensure organized event execution. It serves as a sustainable digital solution suitable for small-to-medium event management businesses seeking structured coordination and budget control.

Recommendation

Based on user evaluation and performance assessment, the inclusion of a reminder and scheduling feature is recommended for future enhancement. This function would allow users to set personalized alerts for payments, events, and task deadlines, improving time management and responsiveness.

It is also advised to consider supplier integration in future versions to streamline coordination with suppliers while keeping administrative control centralized. Additionally, the development of a mobile application version would improve accessibility for clients and organizers managing events remotely.

To further enhance data security and operational reliability, automated data backups and an expanded analytics feature could be implemented for better financial forecasting and decision-making. Continuous training and regular feedback sessions are also encouraged to maintain optimal system performance and ensure that users maximize the platform's potential.

In conclusion, the Web-Based Event Planning System with Budget Tracking has proven to be an effective and reliable solution for Noreen Photography, significantly improving efficiency, communication, and financial management. With future enhancements, it can further support the company's growth and set a standard for event planning systems in similar industries.

Customer Contract

Republic of the Philippines
Cagayan de Oro City

May 22, 2024

CONTRACT OF SERVICES

KNOWN ALL MEN BY THIS PRESENT

This Contract made and entered by and between:

Noreen Photography and bridal fashion with the principal place of business at Capistrano – Mabini Street, Cagayan de Oro City, herein represented by MAYET TOSOY-LAGDAMIN herein referred to as the **FIRST PARTY**.

----- **AND** -----

_____ legal age, single, Filipino and with a residence address at _____ herein referred as the **SECOND PARTY**.

WITNESSETH

1. That the **SECOND PARTY** is in need of the services of the **FIRST PARTY** who shall perform wedding services of the **SECOND PARTY**.
2. That the **FIRST PARTY** has signified her intention to provide the services needed by the **SECOND PARTY** which the latter has accepted.
3. That the **FIRST PARTY** is expected to perform the tasks as stipulated at ANNEX A as agreed by both parties.
4. That the **SECOND PARTY** shall pay the services of the **FIRST PARTY** stipulated at ANNEX A as agreed by both parties in the total amount of _____ (P_____).
5. That the **SECOND PARTY** shall pay (_____% P_____) down payment upon booking and whole payment of the agreed package two week before the wedding.
6. That the **SECOND PARTY** shall return all gowns and accessories within _____ days after wedding.
7. That the **SECOND PARTY** shall be penalized the amount of the item/s in case there's lacking of item/s returned.
8. That the **SECOND PARTY** shall be penalized of _____% per day deductible to cash bond in case of failure of the return of the gowns and/or accessories indicated date of return.
9. That the **SECOND PARTY** shall be penalized of (50%) of the down payment in case of the cancellation of the services of the **FIRST PARTY**.
10. That the **SECOND PARTY** shall claim the photo and video 60 days after the event. Twelve days replacement in case of the defect edited photo and video.

In witness whereof, both parties have here unto set hands this ____ day of _____, 2024, at Capistrano-Mabini Sts., Cagayan de Oro City.

APPENDIX C

Package Brochures

Wedding Package

**ALL IN FOR ONLY
120,000**

INCLUSIONS:

WEDDING COORDINATOR

- . Food and Venue (100pax)
- . In budget of (320/pax)
- . 1 Room Accommodation
- . Wedding Gown and Groom's Attire
- . Maid of Honor Gown
- . Best Man Attire (Suit Set)
- . 4 Sets of Bridesmaid's Attire
- . 4 Sets of Groomsmen Attire (Vest & Pants)
- . 3 Sets of Bearers Attire (Vest & Pants)
- . 4 Sets of Flower Girl Attire with baskets
- . Groom and Bride's Parents Attire
- . Hair and Makeup on the day (12pax)
- . Hair and Makeup for the Bride and Groom for the Prenup Session

PROMO FREEBIES :

- . Robe for Bride
- . Manikin
- . Loose Petals
- . Cord, Veil, Cushion
- . 2 Prenup Attire
- . Kakanin Station

HOTEL CHOICES :
DE LUXE HOTEL, COUNTRY VILLAGE HOTEL,
COCONUT BAY RESORT & RESTAURANT

Rates are subject to change without prior notice.
Charges and Corkages is not included

Wedding Package

**ALL IN FOR ONLY
250,000**

INCLUSIONS:

FULL WEDDING COORDINATION

- . Food and Venue (100pax)
- . 1 Hotel Room Accommodation
- . First User Bridal Gown
- . First User Groom's Attire
- . Suit, Vest, Pants, Nicktie or Bowtie
- . Maid of Honor Gown (1st User)
- . Best Man Attire (Suit Set)
- . 6 Sets of Bridesmaid's Attire (1st User)
- . 6 Sets of Groomsmen Attire (Suit Set)
- . 3 Sets of Bearers Attire (Suit Set)
- . 4 Sets of Flower Girl Attire (1st User)
- . Groom and Bride's Parents Attire
- . Male Attire Suit Set with nicktie
- . Hair and Makeup on the day (14pax)

PROMO FREEBIES :

- . Robe for Bride
- . Robe for Female Entourage
- . Manikin
- . Loose Petals
- . Cord, Veil And Cushion
- . Prenup Hair and Make up
- . 2 Sets of Prenup Attire
- . Wine for Toasting
- . Kakanin Station
- . Party Poppers

HOTEL CHOICES :
PEARLMONT HOTEL, MALLBERRY HOTEL,
COUNTRY VILLAGE HOTEL, N-HOTEL,
ULTRAWINDS & MARCO HOTEL

Rates are subject to change without prior notice.
Charges and Corkages is not included

Letter of Intent

Mayette Lagdamin

Noreen Photography, Bridal Fashion and Event Organizing

Capistrano-Mabini St., Cagayan de Oro City, 9000, Misamis Oriental, Philippines

Good day!

We, the undersigned third-year students of the Bachelor of Science in Information Technology at PHINMA Cagayan de Oro College, are seeking your approval to conduct a research study and interviews as part of our capstone project. Our study focuses on developing and implementing a Web-Based Event Planning System with Budget Tracking. This project is a requirement for our Capstone and Research 1 & 2 courses. The team members working on this project include Laurenz Aizel S. Anches (Project Manager), Christine Grace I. Bacsarsa (UI/UX Designer), Immari Lea B. Mayordomo (System Developer), Chad Richard Shane M. Gamon (System Security), Xena P. Doble (Data Analyst), and Jesse Ray Z. Morcillos (Data Analyst). The system is designed to enhance event organization, budget tracking, and suppliers management by utilizing digital solutions, ensuring better coordination, tracking, and budget management for events.

To proceed with this project, we kindly request your approval and collaboration. We assure you that all gathered data will be kept confidential and used strictly for academic purposes. We sincerely appreciate your time in reviewing our proposal and look forward to working together to successfully develop the Web-Based Event Planning System with Budget Tracking.

Your support and consideration mean a lot to us, and we are truly grateful for your positive response.

Respectfully yours,

Laurenz Aizel S. Anches
Christine Grace I. Bacsarsa
Xena P. Doble
Richard Shane M. Gamon
Immari Lea Mayordomo
Jesse Ray Z. Morcillos

Recommending Approval:

System Usability Scale (SUS)

SUS for Admin

TEST CASE ID	Statement	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
ADM-01	I found the admin dashboard intuitive for managing event records and analytics.	1	2	3	4	5
ADM-02	Generating automated reports (e.g., budget summaries, vendor contracts) felt time-consuming.	1	2	3	4	5
ADM-03	I felt confident configuring role-based access permissions for clients and vendors.	1	2	3	4	5
ADM-04	The system's data synchronization process was unnecessarily complex.	1	2	3	4	5
ADM-05	Most administrators could learn to use this system quickly.	1	2	3	4	5
ADM-06	I encountered inconsistencies in event and vendor management	1	2	3	4	5

	workflows.					
ADM-07	I needed technical support to troubleshoot event scheduling or vendor assignment.	1	2	3	4	5
ADM-08	The notification and event tracking features were easy to use.	1	2	3	4	5

SUS for Client

TEST CASE ID	Statement	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
CLT-01	I found the event booking process easy to understand and complete.	1	2	3	4	5
CLT-02	The system made it clear how my selected budget was being allocated.	1	2	3	4	5
CLT-03	Selecting venues and services through the platform was straightforward.	1	2	3	4	5
CLT-04	The real-time budget tracking feature helped me stay within my budget.	1	2	3	4	5

CLT-05	Most clients could learn to use this system without additional support.	1	2	3	4	5
CLT-06	I encountered difficulties understanding my event details after booking.	1	2	3	4	5
CLT-07	The notifications kept me informed about booking status and vendor confirmations.	1	2	3	4	5
CLT-08	The event summary and final confirmation process were easy to review.	1	2	3	4	5

SUS for Staff

TEST CASE ID	Statement	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
STA-01	I found the system interface easy to navigate for managing assigned tasks and bookings.	1	2	3	4	5

STA-02	The process of viewing assigned events and schedules was straightforward.	1	2	3	4	5
STA-03	I was able to update task progress and booking details efficiently.	1	2	3	4	5
STA-04	The system notifications helped me stay updated on event changes and assignments.	1	2	3	4	5
STA-05	Most staff members could learn to use this system without formal training.	1	2	3	4	5
STA-06	I encountered difficulties accessing or editing my assigned booking details.	1	2	3	4	5
STA-07	The staff dashboard provided useful summaries of my active and completed assignments.	1	2	3	4	5

STA-08	Overall, the system supported me well in completing my assigned event-related tasks.	1	2	3	4	5
--------	--	---	---	---	---	---

SUS for Organizers

TEST CASE ID	Statement	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
ORG-01	I found the system intuitive for managing my event schedules, team assignments, and venue coordination.	1	2	3	4	5
ORG-02	Notifications for new event assignments and timeline updates were timely and useful.	1	2	3	4	5
ORG-03	Notifications for booking requests and event updates were timely and useful.	1	2	3	4	5
ORG-04	The system helped me track upcoming events and manage my team's availability.	1	2	3	4	5

ORG-05	Most event organizers could learn to use this system without extensive training.	1	2	3	4	5
ORG-06	I encountered difficulties updating my pricing and service details.	1	2	3	4	5
ORG-07	I encountered difficulties updating event timelines and task assignments.	1	2	3	4	5
ORG-08	The organizer dashboard provided useful insights about my event performance and team efficiency.	1	2	3	4	5

Scoring Instructions:

Odd-numbered items (positive statements): Score = Response - 1

Even-numbered items (negative statements): Score = 5 -

Response Sum all scores and multiply by 2.5 to get the SUS score (0–100).

Interpretation:

Above 68: Above-average usability.

68: Average. Below 68: Needs improvement.

APPENDIX I

Context and DFD Design

Admin Entity:

The Admin oversees the entire Noreen event management system, managing user roles, approving bookings, and handling financial transactions including payment processing and cash bond administration. They are responsible for ensuring that event packages are properly structured and that organizers are assigned to appropriate events. Admins monitor event progress, generate business reports, and enforce policies related to refunds, cancellations, and cash bond claims. They have system-wide access to create and modify packages, assign resources, and maintain overall system integrity. The Admin serves as the final authority for approvals and financial decisions within the platform.

Organizer Entity:

The Organizer is responsible for coordinating events assigned by the admin. Their tasks include event execution, timeline management, and handling modification requests. Organizers act as the primary point of contact for clients, ensuring that all event components are completed according to specifications and schedule. They oversee the implementation of event details, track progress, document execution, and make necessary adjustments to timelines when required.

Organizers provide regular updates to clients and report significant issues to the admin. They are responsible for documenting any damages that might affect the client's cash bond refund.

Client Entity:

The Client interacts with the system by creating event bookings, selecting packages, and customizing event components. Clients register an account, access a personalized dashboard, and track their event progress through the platform. They submit the ₱3,000 cash bond as a refundable deposit against potential damages. While clients can manage their budget allocation for different event components, they primarily interact with organizers rather than directly with suppliers. They receive updates through notifications, process payments, and can request modifications before event finalization. Clients can provide feedback on event execution and receive their cash bond refund if no damages occur.

Total Summary

User Role	Status	Summary
Admin	Passed	All functionalities work as expected. Full system access with complete administrative controls.
Staff	Passed	All functionalities verified successfully. Limited access appropriate for staff operations.
Client	Passed	All functionalities working properly. Client-focused features for booking and event management.
Organizer	Passed	All functionalities verified successfully. Event organization and assignment management working correctly.

Appendix N

Context/Level 1 Data Flow Diagram

Figure 4.32 Data Flow Diagram

Appendix O

Functional and Non Functional Requirements

Requirement Name	Description
Login	To access the system, the Admin must authenticate using valid email and password credentials with role-based access control.
Dashboard Management	Admin can view comprehensive dashboard with system statistics, active user counts, revenue metrics, and upcoming events overview.
Event Management	Admin can create, view, edit, and delete events using the Event Builder with complete event lifecycle management capabilities.
Event Builder	Admin can design custom events with components, timelines, budgets, and detailed specifications using the visual event builder interface.
Booking Management	Admin can view all bookings, approve/reject booking requests, manage booking status, and track booking history across all clients.
Package Management	Admin can create, edit, and delete event packages with pricing, inclusions, and availability settings for different event types.
Venue Management	Admin can add, edit, and manage venue information including location, capacity, pricing, availability, and venue-specific details.
Client Management	Admin can view all client profiles, create new client accounts, update client information, and manage client relationships and history.
Organizer Management	Admin can manage organizer accounts, assign organizers to events, track organizer performance, and manage organizer assignments.
Supplier Management	Admin can add and manage supplier accounts, approve supplier

	applications, and oversee supplier relationships and services.
Staff Management	Admin can create staff accounts, assign roles and permissions, manage staff access levels, and oversee staff activities.
Payment Management	Admin can view all payment transactions, process refunds, manage payment schedules, and handle financial operations.
Report Generation	Admin can generate comprehensive reports including financial analytics, event performance, user statistics, and export data in PDF/Excel formats.
Activity Logging	Admin can monitor system activity logs, audit user actions, track login history, and review system security events.
User Account Management	Admin can create, update, deactivate, and reactivate user accounts across all roles with appropriate permission assignments.

Requirement Name	Description
Login	Staff must authenticate using valid credentials to access the staff portal with role-specific permissions and restrictions.
Dashboard Access	Staff can view dashboard with assigned events statistics, upcoming tasks, and quick action buttons for common operations.
Booking Management	Staff can create new bookings for clients, edit existing bookings, verify payment status, and manage booking confirmations.
Event Management	Staff can view assigned events, update event details, track event progress, but cannot create or delete events.

Client Management	Staff can create new client accounts, update client information, view client booking history, but cannot delete client accounts.
Payment Processing	Staff can record payment transactions, verify payment receipts, update payment status, but cannot process refunds or delete payments.
Package Viewing	Staff can view available packages and pricing information but cannot create, edit, or delete packages.
Venue Viewing	Staff can view venue information and availability but cannot create, edit, or delete venues.
Organizer Viewing	Staff can view organizer profiles and assignments but cannot manage organizer accounts or permissions.
Supplier Viewing	Staff can view supplier information and services but cannot manage supplier accounts or approvals.
Profile Management	Staff can update their own profile information, change passwords, and manage personal settings.

Requirement Name	Description
Login	Organizers must authenticate using valid credentials to access the organizer portal with assignment-based permissions.
Dashboard Access	Organizers can view dashboard with assigned events statistics, upcoming assignments, and event management overview.
Event Viewing	Organizers can view assigned events, access event details, track

	event progress, and monitor event components and timeline.
Assignment Management	Organizers can view their event assignments, update assignment status, and track assignment progress and completion.
Event Tracking	Organizers can track event milestones, update event status, and provide progress reports on assigned events.
Profile Management	Organizers can update their profile information, manage organizer-specific details, and update professional information.
Settings Management	Organizers can manage notification preferences, update security settings, and configure assignment-related preferences.
Communication	Organizers can receive notifications about new assignments, event updates, and important system communications.

Requirement Name	Description
Login	Clients must authenticate using valid credentials to access their personal portal with secure session management.
Dashboard Access	Clients can view personal dashboard with their event statistics, upcoming events, payment schedules, and quick booking options.
Booking Management	Clients can create new bookings, view their booking history, update booking details, and track booking status.
Event Viewing	Clients can view their event details, track event progress, access event timeline, and view event components and specifications.
Payment Management	Clients can view payment history, track payment schedules, monitor payment status, and access payment receipts.

Package Browsing	Clients can browse available packages, view package details and pricing, and compare different package options.
Venue Browsing	Clients can browse available venues, view venue details and availability, and check venue capacity and pricing.
Document Access	Clients can access event-related documents, download contracts and receipts, and view booking confirmations.
Profile Management	Clients can update their profile information, change passwords, manage contact details, and update personal preferences.
Settings Management	Clients can manage notification preferences, update security settings, and configure account preferences.

Requirement Name	Description
Security	The system must ensure the protection of all user data through encryption, secure authentication mechanisms, and strict privacy controls. Sensitive information such as client records, payment details, and login credentials must be securely stored and transmitted to prevent unauthorized access.
Performance	The system should maintain optimal performance, loading pages within 2 seconds and allowing smooth navigation across modules such as bookings, package management, and budget tracking. It must support both desktop and mobile access to ensure consistent responsiveness across devices.
Reliability	The system must provide 24/7 availability with stable performance, ensuring that booking, payment processing, and event management functions operate continuously without downtime or data loss. Regular backups and server monitoring should be implemented to maintain operational reliability.

Usability	The interface must be intuitive and user-friendly, with clear navigation, logical workflows, and responsive design. Users—including admins, organizers, staff, and clients—should be able to perform their respective tasks efficiently with minimal training.
Data Integrity	All transactions, including bookings, payments, and updates, must be validated and recorded accurately within the system. Proper data verification and confirmation mechanisms should be in place to prevent duplication, loss, or corruption of information.
Accessibility	The system must be accessible across different devices and browsers, featuring a mobile-optimized layout for ease of use. Limited offline functionality should allow users to view essential information, such as event details and bookings, with data synchronization occurring once an internet connection is restored.

APPENDIX P

Data Dictionary

Field Name	Type	Length	Description
user_id	INT	11	Unique ID of the user (Primary Key, Auto Increment).
user_role	INT	11	Role ID (links to tbl_roles.role_id).
user_pass	VARCHAR	255	Encrypted user password for system login.
user_firstname	VARCHAR	100	User's first name.
user_middlename	VARCHAR	100	User's middle name.
user_lastname	VARCHAR	100	User's last name.
user_birthdate	DATE	-	User's date of birth.
user_email	VARCHAR	150	User's email address (used for login).
user_contact_no	VARCHAR	20	User's contact number
user_photo	TEXT	-	Profile picture of the user.
user_status	ENUM	('Active','Inactive')	Indicates if the user account is active or inactive.
is_new	ENUM	('Yes','No')	Indicates if the account is newly created (first-time login).
created_at	TIMESTAMP	-	Date/time when the account was created (default current timestamp).
role_id	INT	11	Unique identifier for each role.
role_name	VARCHAR	50	Role name (e.g., Super Admin, Admin, Teacher, Parent).
student_id	INT	11	Unique identifier for each student.

parent_id	INT	11	References tbl_users.user_id (parent).
parent_profile_id	INT	11	Parent profile details link.
level_id	INT	11	Student's academic level/grade.
stud_firstname	VARCHAR	100	First name of the student.
stud_middlename	VARCHAR	100	Middle name of the student.
stud_lastname	VARCHAR	100	Last name of the student.
stud_birthdate	DATE	-	Date of birth of the student.
stud_enrollment_date	DATE	—	Date when the student was enrolled.
stud_handedness	ENUM	—	Student's dominant hand.
stud_gender	ENUM	—	Gender (Male/Female).
stud_schedule_class	ENUM	—	Student's class schedule (Morning/Afternoon).
stud_photo	TEXT	—	Student's profile photo.
stud_school_status	ENUM	—	Current school status (Active/Inactive).
activity_id	INT	11	Primary key - activity identifier.
advisory_id	INT	11	Foreign key - advisory.
quarter_id	INT	11	Foreign key - quarter.
subject_id	INT	11	Foreign key - subject.
activity_num	INT	11	Activity sequence/number.
activity_name	VARCHAR	100	Activity title/name.
activity_date	DATE	—	Schedule activity date.
activity_status	VARCHAR	100	Status (default Active).
quarter_id	INT	11	Primary key — quarter identifier.

quarter_name	VARCHAR	100	Quarter label/name (e.g., Q1).
start_date	DATE	—	Quarter start date.
end_date	DATE	—	Quarter end date.
subject_id	INT	11	Primary key — subject identifier.
subject_name	VARCHAR	100	Subject name (e.g., Early Math, Language).
advisory_id	INT	11	Primary key — advisory/class identifier.
level_id	INT	11	Foreign key - level.
lead_teacher_id	INT	11	Foreign key - lead teacher.
assistant_teacher_id	INT	11	Foreign key - assistant teacher.
total_male	INT	11	Count of male students.
total_female	INT	11	Count of female students.
total_students	INT	11	Total students (stored/generated).
add_info_id	INT	11	Primary key — additional info id.
user_id	INT	11	Foreign key - user.
barangay	VARCHAR	100	Barangay (address detail).
city_municipality	VARCHAR	100	City/municipality.
province	VARCHAR	100	Province.
country	VARCHAR	100	Country.
tin_number	VARCHAR	50	TIN number.
sss_number	VARCHAR	50	SSS number.
pagibig_number	VARCHAR	50	Pag-IBIG number.
